Overall height: 49"
Overall length: 52"
Total weight: 1,490lbs

The Burchland Mfg. **Blanket Roller2** is an erosion control productivity tool that can save hundreds of hours installing erosion control blankets and matting of all types. It can also be used for other rolled materials such as non-woven geotextiles, straw blankets, and geo-grids. Able to unroll any type of material with or without a center core. This labor saving erosion control device can cut your man hours and double your productivity at the same time. The hydraulic grapple arm on this unit is operated from the seat allowing the operator to back up to a roll of material and load it without the need for additional labor. This saves labor time and money.
